Version Description Document

Netsite Web Server (WEBSv)
Version 1.0.0.2/1.12 (Solaris 2.5.1)

1. System Overview

(Note: This software requires the following licenses: Netsite Web Server v. 1.1).

The Netsite Web Server (WEBSv) is an HTTP World Wide Web Server application produced by Netscape Communications Corp. which accepts and fulfills request for documents and data from compatible HTTP client applications. The Netsite Web Server patch version 1.12, which fixes the security vulnerability discovered in Netscape's key generation software (Summer 1995), has been applied to this segment. The Netsite Web Server segment requires approximately 4 MB of disk space and uses around 32 MB of RAM.

This release of the WEBSv segment includes changes made to the segment to make it a DII COE Component. Changes were also made to allow the Netsite Web server to start-up at system boot time.

Version Summary:

- Made Segment a COE Component
- Modified installation scripts to use COE API calls for user interface.

Notes:

- The following documents have been officially waived by the DII COE Engineering Office for this delivery:

    - "Netsite Web Server User's Manual" - *Justification*: This server software contained in this segment does not require any function to be performed by the users of this service.

    - "Netsite Web Server System Administrator's Manual" - *Justification*: A pointer to the administration server interface is provided at install time; this interface provides on-line documentation. There is also hard copy system administration documentation which accompanies each copy of the Netscape Commerce Server CD-ROM purchased by DISA.

    - "Netsite Web Server Software Requirements Specification (SRS)" - *Justification*: COTS software does not require SRS documentation.

2. Referenced Documents

The following documents are referenced in this VDD:

- "Netsite Web Server Installation Procedures - Quick Guide" delivered with the WEBSv 1.0.0.2/1.12 segment.

3. Version Description

3.1 Inventory of Materials Released

Magnetic media: Two 8mm tapes each consisting of a tar of the Netsite Web Server segment, version 1.0.0.2/1.12 (Solaris 2.5.1)

4. Installation Instructions

Reference the "Netsite Web Server Installation Procedures - Quick Guide" delivered with the WEBSv 1.0.0.2/1.12 segment.

5. Known Problems and Errors

Due to a problem involving the current version of the COEInstaller, the non-zero exit condition generated by the DEINSTALL script upon the user's request is not handled correctly. Therefore, the user option to terminate the de-installation of this segment does not work at this time. However, this option should work once this COEInstaller routine has been modified to properly handle non-zero exit conditions.

6. Release Notes

The Release Notes delivered with the WEBSv 1.0.0.2/1.12 segment is contained in its "SegDescrip" directory. The file containing the Release Notes documentation is called "ReleaseNotes".
